# HDCVI-AI

DeepSense series products adopt the most advanced AI technologies, including deep learning algorithm that primarily targets people and vehicles, which provides higher flexibility and accuracy for end-users. Beyond seeing the world, the power of AI allows devices to perceive the environment and understand the world in a better way.

## Face Recogniton

The face recognition function is to determine whether faces detected are present in the face database, by which users can achieve more accurate realtime monitoring and quick face target search.

- **Black List Alarm**

Accurately matching the suspect's face and triggering the emergency alarm replaces 24-hour manual monitoring to save labor costs.

- **VIP Recognition**

It enables rapid identification of VIP clients in the system and assist operators to provide accurate and timely value-added services for VIP clients to improve customers' satisfaction.

- **Face Search**

Upload face image from external device or face database, then the related face image and video will be displayed. This function is used for fast target searching.

## Metadata Search

Face Metadata is feature attribute information extracted from a human face like gender, age, glasses, moustache, expression etc. It is helpful to narrow down a query based on the feature search.

## 4K Ultra High Definition

4K features 4 times the resolution of 1080P. Therefore, 4K products present images with impressive clarity and abundant details. As the first technology to release 4K-over-coax, HDCVI again leads the industry with a new and complete 4K product series which better fits the needs of various application and projects with different scales and budgets, enabling 4K to prevail in the market.

Provides crystal-clear details even during digital zoom with 4x pixels more than 2MP video surveillance.

## Starlight+

Performance under low illumination is a common challenge faced by the surveillance industry. The HDCVI 4K series adopts an up to 4/3" large sensor and advanced image processing technology to ensure high performance even under ultra-low light conditions.

- Large aperture combined with big pixel size (4.63μm) ensures Starlight+ performance.
- Excellent full color image quality even under low illumination.

## IoT

HDCVI-IoT is a comprehensive system linking HDCVI video, audio and data with sensor info such as temperature, humidity, and alarms to warn potential risks and to provide alarm visual verifications.

Simple HDCVI-IoT system diagram:

- Collects temperature & humidity info to enhance process efficiency
- Integrates wireless sensors to sound alarm in real time
- Alarm visual verification with HDCVI video, audio and data
- Accurate intrusion detection based on both PIR & motion
- XVR with centralized IoT management, data reports and friendly UI
- Easy HDCVI system deployment saves costs

Visual alarm verification

The capture of negligible movements occupies storage space, and can result in overreactions and waste of labor and resources. Video & PIR Dual-detect can improve the accuracy of motion detection triggering which plays an auxiliary role to filter false alarms caused by indifferent objects and saves the video storage.

Integrate video with sensor info

With HDCVI-IoT, a climate-controlled warehouse is able to prevent theft while monitoring storage conditions, and alerts about events like sudden intrusion or rising temperature are all accompanied with video for verification. Warehouses already equipped with analog systems can be easily upgraded to HDCVI-IoT at little cost.

## POS 2.0

The H.265 XVR series integrates POS (Point of Sale) functionality with video to record business information, identify problems, and provide evidence for disputes for retail applications. Video and corresponding POS information can be shown simultaneously in both live and playback mode. The system also supports accurate search and fuzzy search to find bills and associated recordings.

### POS Integration at XVR

## PoC

PoC (Power over Coax) transmits both video and electrical power over a single coaxial cable. HDCVI PoC technology further simplifies HDCVI system deployment, reducing time and cost. Long distance transmission capability guarantees up to 400m for 1080P and 300m for 4MP transmission.

### Conventional System:

### PoC System:

## Broadcast-quality Audio

Audio info supplies supplementary evidence to video surveillance, and can be used to settle disputes. In applications where conflicts occur, such as checkout counters, loud and clear audio can be useful to uncover reasons for the event. HDCVI offers multiple models supporting audio-in interface or built-in mic. Taking advantage of innovative lossless audio-over-coax transmission technology and advanced noise reduction algorithms, HDCVI is now able to provide users an enjoyable experience with newly released broadcast-quality audio.

\*All Fighter series cameras are equipped with audio-in interface, which can connect to pickup. Built-in mic is also supported on select models.

# DORI Distance (D/O/R/I)

## Find the Optimal Camera for Your Individual Surveillance Needs

The DORI distance is a “general proximity” of distance which makes it easy to pinpoint the right camera for your needs. The DORI distance is calculated based on sensor specification and lab test result according to EN 62676-4 which defines the criteria for Detect, Observe, Recognize and Identify respectively.

- Detect: 25ppm
- Observe: 63ppm
- Recognize: 125ppm
- Identify: 250ppm
